

Trex Composite Fencing Systems provide flexible options in a variety of applications. Some of the product benefits are:

- » Full privacy with interlocking pickets
- » Sturdy posts that can be used as sleeves or standalone
- » Engineered aluminum bottom rail for strength and rigidity in vertical application / galvanized steel frame in horizontal application
- » No rotting or warping; resistant to insects
- » No painting or staining
- » High wind resistance
- » 95% Recycled Content; sourced in the United States
- » 5 LEED point contribution
- » Internationally established brand

## PRIVACY RAILING

When privacy is the preferred objective, Trex composite components are easily adaptable for height and width. Privacy railing isn't just for decks. The hollow posts can be sleeved over concrete mounts for pads such as those found at outdoor restaurants.

## SKIRTING

The underside of a deck is often an unsightly space. Skirting using Trex interlocking pickets can dress up the area. Trex components also provide an attractive enclosure for equipment.

## SCREENS

Because Trex components provide full privacy, the system can be a more affordable, lighter alternative to walls. Neighbors also appreciate the significantly reduced maintenance requirements. No painting and no staining needed.
